Clean Copy of amended claims.  
Claims: 1 claim.

1. A massage and tactile stimulation device comprising a hand covering made of a resilient material having a palm wall and a back wall, said walls connected by a means for joining two pieces of material, said glove having one or more predetermined upward projections secured at one or more effective working areas of the glove, said projection attached to said glove by means providing for stationary bonding, said device being with one or more friction areas attached to said glove at effective working areas by means providing for stationary bonding.

2. The glove of claim 1 wherein said resilient material is lycra or spandex.

3. The glove of claim 1 wherein said means for joining 2 pieces of material is sewing.

5. The glove of claim 1 wherein said effective working area for said projection includes pad of digits, a palm, and a region proximal phalanges.

6. The glove of claim 1 wherein bonding for said projections and said friction area is pressure sensitive adhesion.

8. A massage and tactile stimulation device for manual control and operation constructed of a flexible rubber-like material that contours to the anatomy of the underlying joints and part of body covered by said device, said device having one or more predetermined prominent projections made of a rubber-like material providing a means for deep and point specific pressure to affect deeper tissues of recipient of said device, said projections located at a first effective working area of said device.

What rubber friction areas?

7. The device of claim <sup>8</sup> 6 wherein parts of body covered by said device includes one of the following: a hand, an elbow, and a foot.

<sup>10</sup>  
8. The device of claim <sup>8</sup> 6 wherein effective working areas for said projections <sup>indiv. - See of diff t.</sup> (include finger pads, a palm, knuckles, an elbow, and a sole of the foot.) <sup>drawn human body</sup>

whereby deep pressure is imparted by said device

and

whereby said projections optimize the benefits of massage and tactile stimulation.
